

DRACULA

DOUBLE SHAFT SHREDDER

The primary double-shaft shredder DRACULA is a machine designed for primary roughing of solid urban waste, aluminium, bulky waste, used car tyres and wood.

It can be fixed or movable, with electrical or diesel power engine. In both cases the transmission is hydraulic. In the movable configuration the machine is mounted on mobile tracks and it includes a conveyor belt and a built in magnetic separator. The handling of the shredder is tracked through a radio-control for complete safety.

MATERIAL

Aluminum
 Wood
 Pallets
 Railway sleepers
 Dead branches
 Urban solid waste
 Industrial waste
 C&D
 Paper
 Tyres
 Bulky waste
